*To support our international projects, we are looking for a*

## **Project Engineer**

### **A trainee function with great possibilities to grow**

Gemco realizes foundry projects worldwide for clients in the automotive, railway, mining, windmill and many other industries.

Typical projects are the design and greenfield realization of complete new foundry plants or the restructuring and modernization of existing ones.

Our focus is on providing customized foundry solutions. We select and integrate different equipment from established suppliers, but we also design/develop and build dedicated machines as client specific solutions.

Our project teams are lean and multidisciplinary; with teams sized up to 10 colleagues, you cover all aspects of these challenging projects.

Our Project Managers are in charge of their project teams and responsible for the realization of the project. Project teams consist of Project Engineers, Design Engineers and experienced Foundry Technologists.

#### **The function**

During your period as a trainee, Gemco facilitates a dedicated training on the job, external course(s) in foundry technology and you will be trained and coached to design, build and start up a foundry plant. You will control and supervise the quality of and the interfaces between the different groups of machineries, both during the engineering stage as well on the construction site. This way you will quickly learn many of the different (technical) aspects of our projects.

During and after your trainee period you will be introduced to the tasks and corresponding responsibilities of a Project Engineer: from developing technical designs and specifications, prospect and selection of suppliers, purchasing negotiations and contract awarding, technical review and progress monitoring up to management responsibilities for parts within the project. In this period of your career you will travel frequently, to suppliers and to the project site.

In time you can chose your career path, depending on your experience and preferences: engineering, project management, site management or sales.

#### **Your profile**

- Technical mechanical education, MSc
- Willing to learn different fields of technology
- Good knowledge of English (verbal and written) and preferably German and/or other languages.

- You show initiative, are energetic and you have a client-oriented attitude.
- You are creative, are able to handle a lot of details, you are quality oriented and persistent.
- You are willing to travel and stay abroad (also for a longer period of time)
- You are flexible and easily adjust to different circumstances and different cultures
- You are a strong and straightforward team player and dare to take responsibility.

### **We offer**

- A dynamic function within an enthusiastic and result driven team
- Lots of possibilities for individual growth and development (coaching and training on the job) within a growing and innovative organization
- High degree of independence and responsibility
- Informal working atmosphere
- Salary and secondary benefits in accordance with age, education and experience
