

Gemco Cast Metal Technology is an internationally operating company with headquarters in The Netherlands and subsidiaries in North America, Russia, and China.

Gemco provides consulting, engineering and project management services to international renowned clients who realize projects within the cast metal industry.

For more information, please visit our website: www.gemco.nl

To support our international projects, we are looking for

Students/interns Mechanical Engineering for projects in Mexico, Poland and Macedonia

Projects

Gemco is currently preparing the construction of three green field foundry facilities in the above mentioned countries. By the end of 2017, new buildings must be constructed and transformed into running factories with production lines of new machinery.

The internship

During your internship you become a member of the project team and you will assist the project manager and the site manager on site.

The site manager is responsible for the installation and commissioning, by suppliers and customers, of products and machineries on the right time and in the right place under safe circumstances on the site.

He takes care for a smooth organization, for the logistic processes and the safety of all employees. The site manager attends the site for a longer period of time. He is the linking pin between the customer, suppliers and his colleagues of Gemco in the Netherlands.

The project manager is basically working in the Netherlands and attends the site frequently.

The student will be located on site and will support the site manager and the project manager and the other colleagues working for the specific project. Depending on the skills and objective of the student, the work may vary from organizing meetings with customers, assisting in the supervision of suppliers to setting up and implement logistic plans.

Being on the site, you will learn about what it takes to build a factory: the engineering and the different process equipment, planning, logistics, administration, control, safety, contact with customers, suppliers and locals, etcetera.

Your profile

You are studying mechanical engineering (bachelor) and you would like to enlarge your theoretical knowledge with a practical (learning on the job) international internship.

You can cope with stress, have lots of energy, you can work in a team, you are client oriented and you are willing to travel and stay for a longer period of time abroad.

Your must be able to communicate in English in written and spoken. Knowledge of Spanish, Polish or German is an added value.

Period of internship

During the period July 2017 until the end of March 2018 (and maybe longer) we are able to offer an internship to multiple students. We expect the duration per internship to be four to six months.

**We offer**

- An allowance of € 300, - gross per month.
- During your stay abroad we will reimburse all expenses for travel and accommodation.

Information

For information about this position and our activities, you can contact Daan van Heereveld, Operations Manager. Phone: +31(0)40 -2643.668.

For further information you can contact Monique Westendorp-Bax, HR Manager.

Phone: +31 (0)40-2643.626 (reachable on Monday morning, Tuesday and Thursday morning).

Or we can bring you in contact with one of our previous students.

And please visit our website: www.gemco.nl or look at YouTube for a visual presentation of who we are and what we do: <https://www.youtube.com/watch?v=orcvYSY2o3Y>

Application

Send your written application, curriculum vitae included, by email to

Monique.westendorp@gemco.nl

Please mention the period you prefer for your internship.
