

Within the worldwide foundry industry Gemco Cast Metal Technology stands for Gemco Engineers BV in the Netherlands (headquarters) and Knight Wendling GmbH in Germany. We are internationally operating companies with offices in North America, Russia, and China. Gemco provides consulting, engineering and project management services to international renowned companies who realize projects within the cast metal industry. For more information, please visit our website: www.gemco.nl

To support our international projects, we are looking for a

Project Engineer, 2 - 5 years of experience Mechanical Engineering

Gemco realizes foundry projects worldwide for clients in the automotive, railway, mining, energy and many other industries.

Typical projects are the design and greenfield realization of complete new foundry plants or the restructuring and modernization of existing foundries.

Our focus is on providing customized foundry solutions. We select and integrate different equipment from established suppliers, but we also design/develop and build dedicated machines as client specific solutions.

Our project teams are lean and multidisciplinary; with teams sized up to 10 colleagues, you cover all aspects of these challenging projects.

Our Project Managers are in charge of their project teams and responsible for the realization of the project. Project teams consist of Project Engineers, Design Engineers and experienced Foundry Technologists.

The function

During a period of comprehensive introduction you will learn along by doing (with training on the job and coached by an experienced colleague). You will be brought up to standard by means of external courses in applied technologies within the foundry industry.

You can soon take on your role of Project Engineer and you will work on technical installations, specifications, prospects and selecting the corresponding suppliers. Together with the members of the project team, you will be responsible for equipment purchasing and the realization of the project.

In this phase you become more and more responsible for designated parts of the projects.

You will have contact with both clients and suppliers for auditing manufacturing progress and quality as well as interface management and control.

In this stage you will travel frequently, to suppliers and to the project site.

Assignment of site responsibilities during the installation and start-up phase of the project is possible.

Your profile

- Technical mechanical education, MSc or BSc
- Experience with (3D) CAD systems is preferable
- You have affinity with Project Management and Monitoring technics
- Good knowledge of English (verbal and written) and preferably also German
Knowledge of other languages (e.g. Chinese, Arabic, Spanish) is an asset
- You show initiative, are energetic and you have a client oriented attitude
- You are creative, are able to handle a lot of details, you are quality oriented and persistent

- You are willing to travel and stay abroad (also for a longer period of time)
- You are flexible and easily adjust to different circumstances and different cultures
- You are a strong and forthright team player and not afraid to take responsibility
- 2-5 years experience within (heavy) mechanical industries, e.g. engineering construction, installation and/or maintenance functions is an asset

We offer

- A dynamic function within an enthusiastic and result driven team
- Ample possibilities for individual growth and development (coaching and training on the job) within a growing and innovative organization
- High degree of independence and responsibility
- Informal working atmosphere
- Salary and secondary benefits in accordance with age, education and experience

Information
