For more information, please visit our website: [www.gemco.nl](http://www.gemco.nl)*

To support our international projects, we are looking for a

## **Junior Project Engineer a function with great possibilities to grow**

Gemco realizes foundry projects worldwide for clients in the automotive, railway, mining, energy and many other industries.

Typical projects are the design and greenfield realization of complete new foundry plants or the restructuring and modernization of existing foundries.

Our focus is on providing customized foundry solutions. We select and integrate different equipment from established suppliers, but we also design/develop and build dedicated machines as client specific solutions.

Our project teams are lean and multidisciplinary; with teams sized up to 10 colleagues, you cover all aspects of these challenging projects.

Our Project Managers are in charge of their project teams and responsible for the realization of the project. Project teams consist of Project Engineers, Design Engineers and experienced Foundry Technologists.

### **The function**

During your period as a trainee, Gemco will give you a dedicated training on the job. You will be trained and coached in the several aspects to design and build a foundry. You will be introduced to different project disciplines within one of our project teams. These can be in the field of 2D/3D designing, interface management, engineering, purchasing, monitoring of equipment suppliers and/or equipment installation and start up on the project site.

In some of these disciplines you will practice tasks and take corresponding responsibilities of a Project Engineer. During the trainee period you may have to travel frequently to customers, suppliers and/or to the project site.

In this way you will quickly learn many of the different (technical) aspects of our projects.

In time you can choose your career path, depending on your experience and preferences into the direction of engineering, project management, site management or sales.

### **Your profile**

- Technical mechanical education, MSc
- Willing to learn different fields of technology
- Good knowledge of English (verbal and written) and preferably German
- Knowledge of other languages (Chinese, Arabic, Spanish) is an asset
- You show initiative, are energetic and you have a client-oriented attitude
- You are creative, are able to handle a lot of details, you are quality oriented and persistent
- You are willing to travel and stay abroad (also for a longer period of time)
- You are flexible and easily adjust to different circumstances and different cultures
- You are a strong and forthright team player and dare to take responsibility

### **We offer**

- A dynamic function within an enthusiastic and result driven team
- Ample possibilities for individual growth and development (coaching and training on the job) within a growing and innovative organization
- High degree of independence and responsibility
- Informal working atmosphere
- Salary and secondary benefits in accordance with age, education and experience

### **Information**

For information about this position and our company, you can contact Daan van Heereveld, Manager Operations, or Monique Westendorp, HR-Manager, phone +31 (0)40 2643607.
